No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   В
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Qy
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The present sequence encodes a human beta-transducin repeat containing CC protein (beta-TrcP). The protein directs proteins to the proteosome CC degradation pathways. The protein is able to interact with the Vpu CC protein of human immune deficiency virus-1 (HIV-1), cellular proteins CC LappaB or beta-catenin (bC) and/or protein snd thus their targeting to cubiquitinylation of phosphorylated proteins and thus their targeting to CC proteosomes for degradation. Depending on whether the process is CC inhibited or promoted, the result may be delayed breakdown of CD4 (in CC cases of HIV-1) infection); increased activity of IKB (and thus reduced CC activity of NFkappaB) and increased degradation of mutant bc in tumour CC cells, or increased bc survival (and reduced apoptosis) in Alzheimer's CC patients. The beta-Trcp protein, and its active peptide fragments, or its CC nucleic acid, are used to screen for anti HIV-1 agents (antivirals), CC antitumour agents that disrupt cell cycle regulation or protein CC degradation in human tumour cells, and anti-inflammatory agents that CC disrupt activation by NFkappaB. Fragments of the protein are also CC useful for treating osteo-articular inflammation or acute inflammation
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Matches 2151;

CC which has been shown to have homology to human E3 ubiquitin ligase (E3). CC which has been shown to have homology to human E3 ubiquitin ligase (E3). CC E3 enhances ubiquitination of phosphorylated I-kappa-B, an inhibitor CC protein of nuclear factor kappa-B (NF-kappa-B). Understanding I-kappa-B (CC degradation via the ubiquitin pathway is useful for identifying CC modulators of this process for use in treating diseases associated with CC extivation of NF-kappa-B. In vitro analysis suggests that deletion of CC the F-box results in a protein that functions as a dominant negative CC molecule in vivo. Transient over-expression of delta-beta-TrCP (a CC deletion mutant) inhibited the degradation of endogenous I-kappa-B-alpha CC in stimulated Jurkat cells, resulting in accumulation of phosphorylated CC in stimulated Jurkat cells, resulting in accumulations of NF-kappa-B CC activity. E3 and beta-TrCP can be used to screen for modulators of NF-kappa-B CC inflammatory diseases, autoimmune diseases, cancer and viral infections. Sequence 2151 BP; 628 A; 467 C; 513 G; 543 T; 0 other;

Novel nucleic acid for screening compounds useful for treating proliferative and differentiative disorders such as cancer and disorders comprises sequences encoding ubiquitin ligases $\,$ immune

Disclosure; Figure 3b, 3c, 3d; 245pp; English.

Nucleic acids encoding substrate-targeting subunits of ubiquitin ligases with F-box motifs (F-box proteins) are useful for diagnosis of proliferative and differentiated related disorders by measuring FBP gene expression. Cells expressing such proteins or their fragments are useful for screening compounds. The compounds are agonists or antagonists, which are useful for treating a proliferative or differentiative disorder in a mammal such as breast, ovarian and prostate cancer and small cell lung carcinoma and also major opportunistic infections, immune disorders, cardiovascular diseases and inflammatory disorders. FBP protein, analogs, derivatives and their subsequences, anti-FBP antibodies are also useful in diagnosis of the disorders.

Sequence 2151 BP; 628 A; 467 C; 513 G; 543 T; 0 other;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          DЬ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Qy
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  CC ligases) which can be used for the targetted degradation of a target CC polypeptide in vivo. Targetted degradation is achieved by expressing CC the ubiquitin ligase in a cell linked to the interaction domain of CC the target polypeptide and thereby recruiting the target polypeptide CC to the ubiquitin ligase. Such methods are useful for decreasing or CC increasing the level of a target polypeptide and for creating and CC expressing a destabilized polypeptide which is subjected to SCF CC useful for preventing or treating diseases caused by the presence of abnormal amount of the specific polypeptides, for drug discovery and for gene therapy. Diseases treated include cancer, by degradation of concoproteins, Huntington's disease, other proliferative disorders and microbial infections. The method provides a quick and easy alternative to gene knockout technology. The target polypeptide can be degraded at all stages, or a specific stage, of development in the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Matches 2151;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           B
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               밁
                                                                                    The invention relates to methods of altering the polypeptide levels in a cell, using proteins selected from S-phase kinase associated proteins 1 and 2 (SKP1, SKP2), SKP2-like proteins (ZF) and CUL-1 (a member of the cullin/ CDC53 family of proteins). The method is useful for altering the level of p27, cyclin E, Max, Mad, c-Myc, MDM2, p53, Bax, Bad or Bcl-2 polypeptide in a cell. SKP2 and SKP2-like protein levels are useful for detecting tunours, and in monitoring tunor treatment in a mammal. Agents that modulate interactions between SKP and target proteins are useful for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               2101
                                                                                                                                                                                                                                                                                                                                                                                                                      Modulating polypeptide levels in a cell, diagnosing and treating involves altering levels of proteins such as S-phase kinase assoc proteins 1, 2 and cullin/CDC53 proteins .

them with genetically engineered vectors. Agonists or antagonists can be used in the treatment of cell proliferative and inflammatory disorders associated with decreased or increased CSIGP expression. CSIGP is used in the diagnosis, prevention and treatment of cell proliferative disorders like arteriosclerosis, cirrhosis, cancer, hepatitis and inflammatory disorders like AIDS, Addison's disease, multiple sclerosis, etc.
                                                                                                                                   The present sequence is a cDNA obtained from Incyte clone 3239149 of COLAUCT01 library. It encodes cell signalling protein-12 (CSIGP-12). is expressed in musculo-skeletal, gastrointesinal and nervous tissues. Fragments of CSIGP encoding nucleic acid can be used as

                                                                                                                                                                                 The invention relates to polynucleotides (AAK51456-AAK53435) and the encoded polypeptides (AAM78333-AAM80302) that exhibit activity elating to cytokine, cell proliferation or cell differentiation or which may induce production of other cytokines in other cell populations. The polynucleotides and polypeptides are useful in gene therapy, vaccines or peptide therapy. The polypeptides have various cytokine-like activities, e.g. stem cell growth factor activity, haematopoiesis regulating activity, tissue growth factor activity, immunomodulatory activity and activity in the diagnosis and/or activity in the diagnosis and or ac
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Tang YT, Liu C,

The polynucleotides and polypeptides are useful in gene therapy, vaccines or peptide therapy. The polypeptides have various cytokine-like activities, e.g. stem cell growth factor activity, haematopoiesis regulating activity, tissue growth factor activity, haematopoiesis regulating activity, initial and may be useful in the diagnosis and/or treatment of cancer, leukaemia, nervous system disorders, arthritis and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Claim 1; Page 4585-4586; 6221pp; English.

             The invention relates to polynucleotides (AAK51456-AAK53435) and the encoded polypeptides (AAM78323-AAM80302) that exhibit activity elating to cytokine, cell proliferation or cell differentiation or which may induce production of other cytokines in other cell populations. The polynucleotides and polypeptides are useful in gene therapy, vaccines or peptide therapy. The polypeptides have various cytokine-like activities, e.g. stem cell growth factor activity, haematopoiesis regulating

The F-box protein can be used for the gene therapy of colon cancer by being recombined to a virus vector. The present sequence encodes the human beta-TTCP protein from the

The production of other cytokines in other cell populations. The polypeptides are useful in gene therapy, vaccines or peptide therapy. The polypeptides have various cytokine-like activities, e.g. stem cell growth factor activity, haematopoiseis regulating activity, tissue growth factor activity, immunomodulatory activity and activin/inhibin activity and may be useful in the diagnosis and/or treatment of cancer, leukaemia, nervous system disorders, arthritis and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Claim
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Sequence
